FICTIONAL DEMO DOCUMENT - not real data
Kestrel Field Reserves Memo (Marrow Basin, fictional)
Prepared by Tallgrass Fictional Energy for the 2025 year-end review.

1. Reserves summary as of 2025-12-31
Proved (1P) reserves for Kestrel Field are 14.2 MMbbl of oil.
Proved plus probable (2P) reserves are 21.7 MMbbl of oil.
Proved, probable and possible (3P) reserves are 30.1 MMbbl of oil.
The booked recovery factor is 28 percent of original oil in place.
Original oil in place is estimated at 77 MMbbl.

2. Development plan and risks

The 2026 program calls for three infill wells: Kestrel-7, Kestrel-8 and Kestrel-9.
Base decline for the existing wells is 11 percent per year.
The main subsurface risk is rising water cut on the eastern flank,
where the produced water fraction reached 38 percent in December 2025.
Capital cost for the three-well program is 18.5 million USD.
Management recommends a waterflood pilot only if the water cut exceeds 50 percent.
